A. KEY MESSAGES

FP2

FP4

Because of the relatively successful 2015 Paris Climate Agreement, climate change remained high on the global agenda in 2016, with emphasis now shifting to implementation. CCAFS was involved in numerous initiatives; with the UNFCCC, major investors (e.g. GCF) and private sector. The focus on climate change resulted in good citations and downloading of CCAFS papers (134 peer-reviewed papers in 2016 – click to view full list of 2016 publications). E.g., the paper setting a global target for emissions reduction in agriculture to meet the 2°C target was widely communicated, as measured by Altmetric: in the top 5% of all research outputs, and #1 of 2,316 articles in the high-impact Global Change Biology.

2016 was the 2nd year of implementation of a new portfolio, based on a major planning exercise in 2014 to establish a theory of change (ToC) from project to global levels in preparation for Phase II. Flagship 1 ToC focuses on empowering national and subnational organisations and key actors (e.g. major bilateral development agencies) with tools and knowledge to identify best bet Climate-Smart Agriculture (CSA) options, and to establish incentive systems that scale up CSA. In 2016, Flagship 1 trialled 47 CSA practices at 36 Climate-Smart Village (CSV) sites across the 5 CCAFS regions. There was strategic support to 8 national and 15 subnational initiatives, 4 key regional/global players (helping shape over \$350 M investments) and 8 value chain/private sector actors (Box 1 – click for full set of 2016 outcomes reported by projects).

Box 1. Top outcomes for CCAFS and partners in 2016 by Flagship

- 1. \$350 M of climate change investment in Niger and Kenya (CIAT, ICRAF, ICRISAT; NARS, WB)
- 2. <u>Scaling out CSA</u> through <u>2000 additional villages in India and Nepal</u> (CIMMYT, ICRISAT, Bayer Crop Science, LI-BIRD, NARS, Practical Action, ITC Ltd)
- 3. State and non-state actors prepare implementation guidelines and concept notes to scale-up CSA in Tanzania (CIAT, ICRAF, ACSAA, COMESA, FAO, MALF, NEPAD)
 - 4. <u>Major global food security investments and programming towards encompassing CSA principles using CCAFS tools (CIAT, ICRAF)</u>
 - 5. Asia-Pacific Economic Cooperation develop a new Pacific-wide CSA initiative (CIAT, IRRI, USDA)
 - 6. <u>330,000 farmers in Honduras and Colombia use tailored seasonal advisories to adapt to climate variability (CIAT, IRI, Corpoica, DICTA)</u>
 - 7. Rwanda integrates participatory delivery of rural climate services into agricultural extension (CIAT, IRI, University of Reading, Meteo-Rwanda, NARS)
 - 8. <u>Costa Rica</u> and <u>Guatemala</u> improve decision-making for emergency response and early warning (Bioversity, CATIE, ACF, NARS, University of Costa Rica)
 - 9. <u>Insurance regulatory reviews in Honduras</u> (IRI, SAG, REDMICROH, MiCRO, Zamorano University))
 - 10. Strengthening investment in climate services in East Africa through ICPAC (IRI, ICPAC, UK Met)
 - 11. Paddy rice research supports Vietnam's move from INDC to NDC (IRRI, IAE, IPSARD, MARD)
 - 12. <u>Kenya prepares GCF concept note for low-emission and climate-resilient dairy development</u> (ICRAF, ILRI, UNIQUE Forestry, University of Vermont, Brookside, FAO, IFAD, NARS)
 - 13. <u>Mexican government supports scaling out technologies for better N management</u> (CIMMYT, Michigan State University, NARS)
 - 14. <u>Analysis of 2015 Paris Agreement pledges informs development planning and UNFCCC</u> negotiations (University of Vermont, University of Copenhagen, WISAT, CIAT, FAO)
 - African negotiators submit on gender and agriculture to the SBI of the UNFCCC (WISAT, Africa Women Empowerment, AWGGCC, CARE, CIMMYT, IRRI, Kenya National Gender and Equality Commission, UNIQUE Forestry)
 - 16. <u>Central American Agricultural Council (CAC) strongly promoting CSA within regional policies and agreements</u> (CIAT, CATIE, ECLAC, FAO, UCI)
 - 17. CCAFS Climate-Portal data contributes to diverse outcomes, e.g. <u>Indian Cabinet approval of water-energy nexus program</u>, <u>Timor Leste government preparedness to El Niño</u> (CIAT, ILRI, ACIAR, NARS)

CCAFS Annual Performance Monitoring Report 2016

1

Flagship 2 ToC centres on developing climate-informed services that build resilience and support CSA adoption through close engagement with major agencies that can facilitate scaling. In 2016, 17 institutions used CCAFS-generated tools/knowledge to respond to needs of climate service beneficiaries (e.g. use of PICSA to improve participatory delivery of climate information in Tanzania, Malawi and Rwanda). The Flagship work resulted in 330,000 farmers in Honduras and Columbia receiving tailored seasonal advisories.

Flagship 3's ToC is to produce knowledge and tools and engage with stakeholders to inform plans for scaling up low-emissions agriculture. Much of the work focussed on five countries, including helping to shape plans: for dairy in Kenya (linked to GCF); for paddy rice through Vietnam's commitment to Paris 2015; and for better nitrogen management in Mexico. The Flagship produced a comprehensive review and guidance on methods for low-cost field measurement of GHG emissions in book and online formats.

Flagship 4 ToC provides relevant science and tools, coupled with engagement strategies, to contribute options in policy processes and to inform institutional investments in climate-smart food systems. In 2016 CCAFS supported policy processes in 12 countries. At the global level, CCAFS continued engagement with the WBCSD to facilitate a CSA Action Plan for private sector investments; as well as work with the World Bank and IFAD. Open access CCAFS climate data led to outcomes by third parties in India and Timor Leste.

Synthesis of the two most significant achievements/success stories:

- 1. \$350 M of climate change investment in Niger and Kenya. CCAFS ToC includes working with partners to help shape CSA investment. One key partner has been the World Bank, which is planning major CSA investments. CIAT devised a rapid appraisal method to assess CSA country priorities: CSA Country Profiles. The WB has used these widely to guide investments, including in Kenya, where, CIAT and partners have also done numerous County Risk Profiles. These have contributed to shaping the US\$ 250 M Kenya CSA Project. CCAFS developed the CSV AR4D approach as a means to test CSA options for scaling (c. 10 peerreviewed papers). The Niger CSV (ICRAF, ICRISAT, INRAN) has informed the design of the US\$ 111 M Niger CSA support project in 60 communes, with expected direct beneficiaries numbering 500,000. The CSV approach and the Risk Profiles give attention to gender-specific constraints, needs and options.
- 2. Scaling out CSA through 2000+ additional villages in India and Nepal. CSVs in South Asia have been designed, implemented and evaluated in collaboration with NARS (e.g. ICAR, NARC), CGIAR centres (CIMMYT, ICRISAT, IWMI, IRRI), many local universities, NGOs (e.g. Practical Action, Li-Bird), and farmers' groups (including women, youth, marginalised farmers). Previous annual reports documented the successes in Maharashtra and Haryana with upscaling CSVs. The AR4D in the Bihar CSV began in 2011, and has involved laser land levelling, zero tillage, direct-seeded rice, ICT weather and agro-advisories, index insurance, crop diversification, etc. Based on deep engagement and sharing evidence, the Bihar government's investment and agricultural development plan is now targeting CSVs to be implemented across all 38 districts. Similar work has been on-going in Nepal, and in Madhya Pradesh and Telangana states in India where governments, ITC Limited, and USAID are now investing to develop more than 2,000 CSVs.

Financial summary: CCAFS' 2016 total budget was USD 70.558 million composed of: CGIAR W1&2 2016 funds of USD 26,051 million received within the year which includes USD 2,35M of additional funding never confirmed in the Financing Plan and disbursed by the end of the year; USD 42,323 of Bilateral & W3 sources from all CGIAR Participating Centres; and by a CGIAR W1&2 carry-over of USD 2,184 million. Total execution was USD 51,981 million (73,7%). Gender and social Inclusion research activities were USD 5,014 million, approximately 9,6% of the total annual execution. Total W1&2 2016 funds were paid in three tranches, 28% (\$7,265 million) in June, 40% (\$10,487 million) in September and 32% (\$8,299 million) in December. 56% of the funds were W1 (USD 14,502 million), and 44% were W2 (USD 11,549 million).

B. IMPACT PATHWAY AND INTERMEDIATE DEVELOPMENT OUTCOMES (IDOs)

The CCAFS Theory of Change (in Extension Phase proposal) focuses on (Figure 1):

- Flagship 1: Empowering national and subnational organisations and key actors with tools and knowledge to identify best bet CSA options, and to establish incentive systems that scale up CSA.
- Flagship 2: Facilitating major regional to sub-national institutions, through strategic research and engagement, to develop/improve equitable, climate-informed services and to increase investments.

- Flagship 3: Producing tools and knowledge and engaging with key stakeholders to contribute to the development of plans that lead to scaling up of low-emissions agriculture.
- Flagship 4: Providing the relevant science and tools, coupled with engagement strategies, to contribute options in policy processes and to inform institutional investments in climate smart food systems.

To measure progress in the ToC, eight near-term outcome targets (2019) are tracked annually (see <u>CRP 2016 Performance Matrix</u>; Section C2). Targets, which cascade from project to global levels, focus on <u>five IDOs</u> (Figure 1). <u>Baseline</u> data collected from all sites (continuing source of <u>publications</u>) will be <u>recollected in mid-Phase II</u>. These midlines will complement other project information to give a broad picture of changes occurring in the various CCAFS sites. Through regional programs involving integrated activities from villages to regional economic communities, the Flagship products and engagement activities come together as integrated initiatives across scales, and are linked into the strategy to engage key global actors.

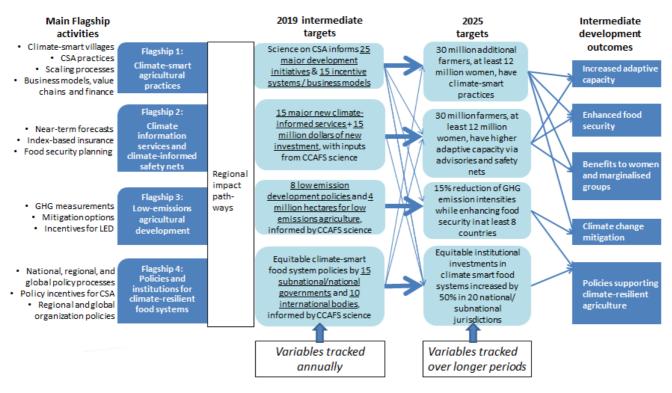

Figure 1. Intermediate targets (2019) and final program targets (2025) for the different Flagships, showing the variables that are tracked annually for each Flagship (as per Extension Proposal).

C. PROGRESS ALONG THE IMPACT PATHWAY

C.1 Progress towards outputs

CCAFS produced ten flagship products and ten flagship tools, highlighted in bold below. Major cross-cutting products included the <u>common CSA metrics framework</u> and a <u>special issue on gender</u>.

Flagship 1 trialled 47 CSA practices at 36 CSV sites across the 5 CCAFS regions, using the CSV AR4D approach, including gender-disaggregated evaluations and the CSA-RA tool. Technologies include stress-resistant varieties (maize, cassava, rice, beans, sorghum, pigeon pea), and improved management of soils (conservation agriculture, no-till, organic production, composting, planting pits), water (water harvesting, small-scale irrigation, drip irrigation), residues (SRI, rice straw processing), and livestock (small ruminants, improved forages). The climate-smart indicator and programming tool was released and tested with multiple partners, including at the national level in Vietnam, Ghana and Mali. Six new CSA country profiles were produced in SA and EA. Local Adaptation Plans for Action (LAPAs) were developed for 2 counties in Kenya with local institutions, plus a further 15 county CSA profiles. For coffee and cocoa systems in LAM and WA, climate impact analysis was used as a basis for developing adaptation options which are now

being implemented using novel incentive mechanisms in Peru, Nicaragua, Ghana and Ivory Coast. An economic tool was developed in the context of CSA costs/benefits in Guatemala. A national framework for climate-resilient agri-fisheries was developed for 10 regions in the Philippines. A range of scaling up mechanisms were piloted. In LAM, EA and SA, a citizen science approach involved thousands of farmers selecting CSA technologies. In WA, certification schemes and impact investment were trialled by Rainforest Alliance and Root Capital. Platforms for scaling out included ClimMob and ESOKO ICT. Rural radio stations in Burkina Faso, Mali and Senegal shared CSA information and tools with farmers and extension services. Global products included a background paper for the SOFA report on innovative finance, published with WB, and The Economic Advantage report, providing economic information on CSA approaches, published by IFAD.

Flagship 2 made significant advances in enhancing the capacity of NMHS through training staff in Rwanda, Ghana and Mali on the ENACTS approach to develop high-quality historic gridded meteorological data sets and associated online Maproom products, which provide analyses of agriculturally important rainfall characteristics on a high-resolution grid. Growing season onset and daily data analysis were implemented by Meteo-Rwanda and regionally by ICPAC. Satellite precipitation maps and analyses, developed primarily for insurance, were the basis of a new platform of agro-climate information and tools in LAM. In SEA, the rice crop manager agro-advisory service for rice farmers in the Mekong River and Red River Deltas included testing use of several online sources of weather and seasonal forecasts to supplement information available to extension workers. Work on climate-sensitive disease early warning included epidemiological GIS training to enable public health workers to analyse national data. In SA, satellite remote sensing, UAVs, digital photographs and hand-held sensors were evaluated for their suitability for loss assessment for crop insurance. Substantial effort on equitable climate services for farmers went to the design and institutional arrangements for scalable and sustainable services in Rwanda, Senegal, Colombia and Vietnam. The participatory climate information services PICSA approach was launched in Rwanda, deepened in Tanzania, Malawi and Ghana, and evaluated. Mobile phone platforms for delivering weather information and advisories were advanced in Ghana and Rwanda with private sector partners. In Honduras, a public-private partnership was put in place to implement a non-commercial index insurance scheme. In SA, significant progress was made in tools, scheme design and testing, and public-private partnerships were developed for the implementation of index-based flood insurance in two states in India.

Flagship 3 further developed its guidance on methods for low-cost field measurement of GHG emissions, including publishing a new book. This guidance, together with an emissions factor database for smallholder agriculture, and links to tools, instructional videos, publications and other resources for estimating emissions are available on the **SAMPLES** website. CIMMYT worked with partners towards a gold standard, open access global database for N₂O emissions. Their data for the tropics/sub-tropics showed a mean N₂O emissions factor of 1.2%, consistent with IPCC's global default factor. WUR and CIFOR produced a global map of hotspots of emissions in the land use sector. An INDC dataset and maps showed that mitigation featured prominently in countries' Paris Agreement pledges. To guide ambition and track progress in mitigation, CCAFS published with ~20 organizations a peer-reviewed target for agricultural mitigation. In Kenya, CCAFS produced a guide to gender-inclusive dairy and along with other technical inputs contributed to a dairy NAMA, while a livestock optimization tool was published for Tanzania. Regional efforts provided technical support for scaling up, e.g. with LAMNET in LAM and in SEA with ASEAN, for whom IRRI produced technical guidance on alternate wetting and drying. Research helped identify low emissions pathways. MAC curves were generated in Costa Rica. Analysis targeted high-yield low-emission pathways for Indian rice, wheat and maize. Also in India, CCAFS started testing solar pump and site specific nutrient management in CSVs. In Brazil, EMBRAPA tested pasture restoration options.

Flagship 4 worked to help policy makers integrate CSA science into policies and programs. The <u>CSA prioritization toolkit</u> provided a basis for national-level prioritization in India, Nepal and Bangladesh, while the scenarios methodology gave inputs to national policies in Costa Rica, Burkina Faso, Ghana, Uganda and Tanzania. Learning alliances and science-policy dialogue platforms continued their work in East and West Africa engaging at both national and subnational levels, and in LAM close engagement with relevant ministries included seconded/joint staff in Honduras, Costa Rica and Peru. Bioversity supported national partners in Benin, Bhutan, Burkina Faso, Costa Rica, Cote d'Ivoire, Madagascar, Nepal and Uganda on sustainable management of plant genetic resources and agricultural biodiversity for climate change adaptation. In WA, CCAFS and partners contributed to capacity development and the development of regional policy products via collaboration with the AU Commission, ECOWAS, UEMOA and CILSS. Regional

discussions began to develop a climate change policy hub in Southeast Asia. CCAFS contributed technical support to the South Pacific Commission to help prioritise adaptation action in this region. Globally, CCAFS involved all CGIAR Centers to make formal invited <u>submissions to UNFCCC SBSTA</u>, plus associated <u>technical materials to support parties' submissions and negotiations</u>. A major capacity development contribution was the CSA guide, an open-access resource in partnership with the World Bank, in three languages.

Open-access databases and publications: CCAFS continued to build and maintain several open-access databases. AgTrials, a repository of climate-specific agricultural trial data now contains 36,222 trials, with 1241 new trials added in 2016, compared to 50 in 2015. Some 838,060 files were downloaded from CCAFS-Climate, which contains downscaled GCM data (300,068 TB data downloaded; 12,933 unique visits; 22,364 total visits). CCAFS scientists produced 349 publications in 2016, including peer-reviewed journal articles, policy briefs, books, book chapters and working papers. 118 of 134 peer-reviewed articles were published in ISI journals, while 53,73% were open access. Highlights included the gender special issue in *Gender Technology & Development*; Reducing emissions from agriculture to meet the 2 °C target in *Global Change Biology*, picked up by >80 outlets including BBC and Reuters, which syndicated worldwide; Timescales of transformational climate change adaptation in Sub-Saharan African agriculture in *Nature Climate Change*, picked up by >50 outlets including BBC, Bloomberg and trade publications; and *PNAS* articles Drivers of household food availability in sub-Saharan Africa and Can sub-Saharan Africa feed itself? Click for the full list of 2016 CCAFS publications.

C.2 Progress towards the achievement of research outcomes and IDOs

Substantial progress was made in 2016 in relation to the 2019 outcome targets (a summary of all outcomes reported in 2016 by program participants has been prepared). From 2017 onwards, program participants will report against Phase 2 targets.

Flagship 1: Climate-smart agricultural practices

2019 target 1: 25 national/subnational major development initiatives and public institutions prioritize and inform project implementation of equitable best bet CSA options. A US\$ 250 M CSA initiative in Kenya and a US\$ 111 M CSA project in Niger (funded by WB) based their design on CCAFS science: country climate risk profiles and CSV experience. Extended support was also provided to USAID FTF and WB on rolling out CSA in ongoing/new initiatives through the extended implementation of CSA planning and decision-support tools. CCAFS gave strategic support to APEC for the development of a Pacific-wide CSA initiative and to at least 4 countries on multi-level CSA planning: Vietnam, Ethiopia, Tanzania and Kenya. In LAM, 12 initiatives and institutions promoted CSA using CCAFS science (Peru, Colombia, Nicaragua, Guatemala) mainly in coffee, cocoa and rice. Rainforest Alliance used CCAFS research to update the Sustainable Agriculture Network (SAN) standard that underpins all their crop-specific certifications. In SA, the knowledge generated by the CCAFS CSV AR4D approach was integrated into agriculture and climate change adaptation programs by the governments of Nepal, Bangladesh, and Bihar in India, as well as by 5 Farm Knowledge Centres in India, and the agribusiness ITC Limited, resulting in some 2000 CSVs being incorporated in new programs.

2019 target 2: 15 public-private actors at national/subnational levels are using new incentive mechanisms or business models that explicitly promote equitable climate-smart approaches along the value chain. At national and sub-national levels, center-led projects in Ghana and India focused on business models and financial/market incentives to promote CSA along the value chain. They have engaged major private sector and civil society actors including Scope Insight, F3 Life & Climate Finance Lab, and CARE. Scaling up of CSA practices with local government was ongoing in 3 Kenyan counties (Kericho, Kisumu and Makueni) and 2 districts (Lushoto and Hoima). In Nicaragua and Peru, 4 producer associations used CCAFS science to assess climate variability. In Vietnam, SRP (a UNEP initiative) promoted standards on sustainable use of resources and low GHG emissions, applied by rice-exporting companies such as the Loc Troi Group. Successful CSA options trialled in CSVs were the basis of WB plans to scale to 60 communes in Niger, and of plans by a number of Indian States. Climate-specific management systems were successfully integrated into extension systems for staple crops in Colombia and Nicaragua.

Flagship 2: Climate information services and climate-informed safety nets

2019 target 1: 15 major regional, national, and sub-national institutions develop or improve major demand-driven, equitable, climate-informed services supporting rural communities. Agricultural extension services and government agencies in Tanzania, Malawi and Rwanda are using PICSA to improve

participatory delivery of climate information. Training and support in ENACTS enabled NMHS in Rwanda, Mali and Ghana to generate and disseminate online, place-based, agriculture-relevant, historic and monitored climate information. AGRHYMET adapted CRAFT to develop improved crop production forecasts across its mandate region, and used CCAFS-supported tools and training to generate high-resolution gridded historic data. In Senegal, ANACIM leveraged CCAFS research and the CINSERE project to generate 15 climate information products for farmers, pastoralists and fisher folk. Sen2agri and ICPAC also used CCAFS tools and training. In Guatemala, SESAN incorporated indicators identified with CCAFS support into an improved food security information platform, and Costa Rica improved its emergency response system through South-South collaboration. In Colombia, IDEAM and Fedearroz adopted improvements to the seasonal climate prediction system, and in Honduras, Zamorano University and the NMHS used CCAFS-IRI satellite-based information; resulting in 330,000 farmers getting tailored seasonal advisories.

2019 target 2: US\$ 15 M increase, relative to 2014, in research-informed demand-driven investments in climate services for agriculture and food security decision-making. CCAFS-led work in Senegal and Rwanda influenced US\$ 2M investment by USAID. Through USAID-funded Climate Services for Africa, CCAFS strengthened an estimated US\$ 2M of DFID-funded WISER investments in climate services in EA through ICPAC, shaping and adding value to both. The project strengthened ICPAC capacity to develop and operationalize value-added climate information. CCAFS used approaches developed by the AGROCLIMAS project to influence US\$ 1M of USAID investment in climate services in Colombia. Index insurance research supported insurance regulatory reviews in Honduras, opening doors for future investment.

Flagship 3: Low-emissions agricultural development

2019 target 1: 8 low emissions plans developed for implementation that have significant mitigation potential, i.e. will contribute to a reduction of at least 5% GHG emissions intensities or reach at least 10,000 farmers, including at least 10% women. In 2016, 5 countries (Colombia, Kenya, Costa Rica, Peru, Vietnam) used CCAFS science to inform national decision-making related to NAMAs, NDCs, concept notes to the GCF, or country planning processes to scale up low emissions practices. This included suitability mapping, targeting, scenarios, gender and adoption studies, and economic analysis. CCAFS continued to provide decision-makers with evidence for smallholder emissions and low emissions options, including for livestock, pasture restoration, paddy rice, and nitrogen fertilizer. E.g. ILRI worked with Kenya Government to use new livestock emissions figures in national plans, while CIMMYT supported use of the GreenSeeker tool in 75% of the 666,000 ha of wheat production in Mexico to reduce N₂O emissions by minimum 25%.

2019 target 2: 4 M hectares targeted by research-informed initiatives for scaling up low-emissions agriculture and preventing deforestation. Direct initiatives in Costa Rica, Colombia and Brazil targeted 0.31 M hectares. In Costa Rica, data on enteric fermentation from different livestock systems is informing NAMA implementation, supporting opportunities to intensify livestock production and contributing to preventing deforestation at the national level. In Colombia, members of the LivestockPlus consortium participated in projects in the Amazon, establishing silvopastoral systems to enhance productivity and reduce emissions in at least 50 lead farms that are aiming to preserve remaining forest lands. In Brazil, CCAFS-CIFOR supported management systems across 13,000 ha and supported smallholder cooperatives across a further 1,000 ha. In Vietnam, scenario analysis supported land use planning for 50,000 ha in Ha Tinh Province.

Flagship 4: Policies and institutions for climate-resilient food systems

2019 target 1: 15 equitable national/ subnational food system policies enacted that take into consideration climate smart practices and strategies, informed using knowledge, tools and approaches. Tanzania's National Environment Policy and Uganda's Agriculture Sector Strategic Plan used CCAFS scenarios and were submitted to Cabinet for approval. CCAFS influenced CSA policies in Costa Rica, Honduras and Colombia. Bangladesh used scenarios and the CSAP toolkit to develop its NAP. CCAFS open access climate data was used by others to inform: an irrigation program approved by the Indian Cabinet; and the allocation by the Timor Leste government of US\$ 12 M to reserve food stocks in response to the 2016 El Nino. CCAFS through IPSARD contributed to Vietnam's Rice Restructuring Strategy. In the Philippines, CCAFS-IFPRI research on rice trade policy influenced the lifting of quantitative restrictions and the restructuring of the National Food Authority. CCAFS, UNEP-WCMC and FAO co-developed scenarios used in Cambodia's Climate Change Action Plan for Agriculture. Scenarios for West Africa were used in 2 reviews leading to refined policies: Ghana's livestock policy and Burkina Faso's National Rural Sector

Program. South Africa is updating agriculture policies that will recognize the role of community seed banks in climate change adaptation.

2019 target 2: 10 regional/ global organisations inform their equitable institutional investments in climate-smart food systems. Although SBSTA/UNFCCC failed to reach a decision on agriculture in 2016, agriculture was prominent in Parties' (I)NDCs and the funding policies of the GCF. CCAFS science, and in particular the analysis of Paris Agreement pledges, was used to inform investment decisions and policy positions of WB, IFAD and WBCSD members. CCAFS provided technical inputs to preparations and submissions to UNFCCC by the Africa Group of Negotiators (including on gender and agriculture), the ASEAN Climate Resilience Network and Latin American negotiators. CCAFS worked with the Central American Agricultural Council on its CSA strategy for Central America and Dominican Republic. In WA, contributions were made to the development of regional policy products via collaboration with the AU Commission, ECOWAS, UEMOA and CILSS. Knowledge outputs generated with OECD analysed the challenges facing the global food system to catalyse decisions on robust policies and the role of the private sector.

C.3 Progress towards impact

The CCAFS 2015 Annual Report provided an overview of progress towards impact during Phase 1. CCAFS has worked with partners in more than 20 countries to deliver results for smallholder farmers and rural food security. Measurable impact in the Extension Phase has included more than 9 million people across 3 continents receiving new and improved climate advisory services, improved weather-index insurance products reaching more than a million households, and reaching 50,000 women in South Asia with peer-to-peer climate-smart training tailored to their needs and priorities. In terms of welfare and climate resilience, CCAFS work in the Extension Phase has led for example to increases in income for 179,000 dairy farmers in East Africa (ILRI and ICRAF), coupled with reduced emissions, raising wheat yields in South Asia by 9% (CIMMYT), through conservation agriculture while also saving water costs via laser land levelling, and saving rice farmers' water and input costs in Vietnam (IRRI) and West Africa (AfricaRice). In Phase 2 CCAFS will track impact on smallholders and other beneficiaries by working from Phase 1 research and impact pathways by (a) working with key partners (national governments, global development partners, farmers' organisations and private sector) to assess impacts of the policies and programs that CCAFS has contributed to, (b) re-surveying the CCAFS baseline to gain insight into pathways to impact by testing the hypotheses of the CCAFS Theory of Change, and (c) supporting impact evaluations at the project level.

D. GENDER RESEARCH ACHIEVEMENTS

In relation to defining gender inequality targets and architecture (Annex 2), CCAFS exceeded requirements. A workshop on *Implementing Gender and CSA: A Framework for Action* was organized to support the integration of the new Gender and Social Inclusion Strategy into CCAFS research. The GenderCC network promotes cross-CRP knowledge sharing with 63 members.

Building an evidence base. Collection and analysis of gender and sex-disaggregated data continued at household, village and national levels and in all regions. A meta synthesis of gendered quantitative and qualitative data was done in Kenya, Uganda, Senegal, Bangladesh, Colombia and Nicaragua. Similar gender analyses were conducted on CSA practices, climate analogue approaches, and climate and weather information and forecasting in SA, EA and WA. Baseline climate services surveys were completed in Rwanda and Cambodia. Research on gender dynamics and labour in livestock and dairy production was undertaken in Colombia, Kenya and Vietnam. Gender reviews of climate and agriculture-related policies and data were completed for the Paris Agreement and INDCs, as well as for 10 countries in LAM, EA, WA, and SA.

Innovations in adaptation and mitigation. Several innovations to integrate gender into prioritizing and scaling up of CSA were developed, including the Climate Change and Social Learning (CCSL) and CSA Rapid Appraisal (CSA-RA) frameworks. A new framework was used in LAM to evaluate gender integration in climate change and agriculture policy instruments. In Burkina Faso, Ghana and India, gender responsive innovations increased crop diversity. A LAPA Innovation Platform is being used to mainstream CSA programs and target and scale up innovations for women in India. Community seed banks and crop diversity practices that include women were assessed. Participatory integrated climate services and an equity assessment framework for index insurance were developed and tested in EA and WA. A practice brief produced with FAO provides criteria for evaluating whether CSA approaches are gender-responsive.

Policy engagement and capacity. UNFCCC work included an analysis of progress in gender equality at COP21 and technical support to the Africa Working Group on Gender and Climate Change (AWGGCC). A gender toolbox, including gender responsive methodologies to address impacts of climate change on food and nutritional security, was submitted to the Central American Agricultural Council. In Costa Rica, a public-private partnership was initiated to develop technical and institutional infrastructure for a gender responsive livestock NAMA. Participatory scenario-guided policy planning that included a gender lens was conducted in Ghana, Tanzania and Uganda to review agriculture and climate change policies, and in Costa Rica for its INDC. A training guide on gender-inclusive climate change policies and institutions was developed in LAM.

Publications: Numerous journal articles, reports, blogs and events were produced as outputs of CCAFS gender and social inclusion research. GSI led a 6-article special issue in *Gender Technology and Development*. The number of youth related publications increased, with a blog on youth rating second in unique page views, after an IWD blog by S. Huyer and J. Bossuet. The Gender and Inclusion Toolbox remained a popular download.

Partnerships: GSI partnered with both public and private organizations, including CATIE, FIDA-Kenya, CARE, Nepal Development Research Institute (NDRI), WISAT, UNIQUE, Ecohabitats, IFAD, FAO, National Gender and Equality Commission of Kenya, Central American Agricultural Council (CAC) and Rwanda Met Agency. Youth organizations include the CSA Youth Network (CSAYN) and CLIMDEV-Africa Youth Platform (ACLYP).

Gender in the workplace: The total extended core team is 43 persons, 51% women. The Director was male. 45% of the senior core team, 2 of 6 (33%) PMC members and 8 of 14 (57%) science officers were female.

E. PARTNERSHIPS BUILDING ACHIEVEMENTS

CCAFS has previously been commended by the ISPC and external reviews for its comprehensive and relevant range of strategic partnerships for key functions (research, capacity building, knowledge management, action on practices, policy and institutional change, and management and governance). Preparation of Phase 2 during 2016 provided CCAFS an opportunity to review and strengthen key partnerships. Lessons learned are the importance of balancing the positives of active demand for CCAFS collaboration from partners against the cost of time to fulfill these demands while still producing original science. With reduced financial and human capacity in Phase 2, CCAFS may need to scale back some partnerships at both global and national levels.

Regional and global partnerships: Key partnership activities at the global level have included participation in all three action groups of GACSA; close engagement with USAID's Feed the Future Program to enable mainstreaming of climate change in all programming; multiple activities with the World Bank including a public-access online CSA guide for WB staff and two CCAFS staff secondments; and the Learning Alliance with IFAD, which in 2016 addressed economics of adaptation and on-the-ground performance of IFAD climate change investments. Regionally, CCAFS worked with NEPAD and national governments in the African Alliance for CSA, with the ASEAN Climate Resilience Network and with the Central American Agricultural Council, as explained above. During Phase 1, CCAFS developed a high level of trust with UNFCCC negotiators in Africa, Southeast Asia and Latin America and was able to provide close support on their engagement on agriculture under SBSTA and gender under SBI.

National policy, implementation and research partnerships: Key partnerships at the national level were largely maintained from 2015 into 2016, for example with Mali's L'Institut d'Economie Rurale, Kenya Agricultural Research Institute, Nepal Agricultural Research Council, and Vietnam's Institute for the Agricultural Environment. One innovation in 2016 was an effort to build stronger links with youth movements, building on earlier Phase 1 experience with young farmers in South Asia. CCAFS East Africa facilitated young farmers' groups and also organized an online discussion forum on youth engagement during World Youth Skills Day. This attracted 70 participants from multiple countries, plus from key regional and global partners such as NEPAD, ASARECA, FAO, CTA, YPARD, CLIMDEV-Africa Youth Platform, Fintrac and AYICC – providing some foundation for future cross-CRP work on youth inclusion. CCAFS also worked with more than 15 governments on preparing for the implementation of their NDCs to the Paris Agreements and related policy instruments such as NAPs, NAMAs and sectoral investment plans.

Private sector partnerships: Private sector partnerships continued to be pivotal to large-scale outcomes, particularly with the insurance industry as reported for 2015. Climate-smart value chain work under CIAT and IITA continued close collaboration with the Climate Smart Cocoa initiative, involving companies Barry Callebaut, Cargill, Ecom Agrotrade, Hershey, Lindt & Sprüngli, Mars, Nestlé, Olam and Touton. An innovation in 2016 was new partnerships with agrifood companies seeking to improve resilience to climate change among their smallholder suppliers. For example, ITC, India's largest supplier of branded foods, approached CCAFS to provide the scientific foundation for a portfolio of land and water Interventions for its CSVs in Madhya Pradesh. At the global level, CCAFS supported WBCSD companies in their ambitious 2030 goals for CSA, for example with data to support their actions in "road test countries" plus an indicator framework and stock-take of global progress.

Cross-CRP coordination: Phase 2 preparations included in-depth review of cross-CRP collaborations, in direct consultation with multiple CRP Directors and members of staff, in both bilateral and multi-lateral discussions. This resulted in a new model for collaboration for Phase 2 that will involve: six subject-specific cross-CRP learning platforms embedded within the Flagships; formal site and country-level collaboration mechanisms in key countries; and specifications of co-investment of financial and human resources plus shared partnerships.

F. CAPACITY BUILDING

Strategy and quantitative achievements: CCAFS capacity enhancement activities are mainstreamed within research and engagement activities, to raise both research capacity among partners (post-graduate students and early or mid-career researchers) and the capacity of research users and co-creators (including farmers, policy-makers and technical staff in implementing agencies, companies and NGOs). In 2016, CCAFS supported 5300 women and 7900 men on short-term programs (down from 2015 due to budget cuts), and 62 women and 65 men on long-term programs. Some 40 multi-stakeholder innovation platforms worked on specific farming systems and national policies.

Enhancing research capacity: Enhancement of research capacity involves training, ongoing support and networking. A key focus in 2016 was training NARS and other research partners to scale up the use and effectiveness of CCAFS tools like CRAFT, ENACT and PICSA. For example, nine training sessions reached 200 participants to build capacity in the crop yield forecasting tool CRAFT, on a strongly demand-driven basis, such as in Nepal to update the Nepal Food Security Monitoring System (NeKSAP). Similarly, CCAFS worked with over 100 researchers in Africa and Southeast Asia to build policy-relevant capacity in smallholder emissions measurement and pro-poor mitigation options.

Enhancing capacity of research users: Among users of research, CCAFS has enhanced capacity by providing facilitation of policy analysis and formulation, field visits and demonstrations, policy learning platforms, south-south exchanges, and training sessions from farm to global level. For example, a global workshop on use of remote sensing in drought insurance proved critical to bridge the gap between science and insurance companies, which hold contracts with millions of farmers. Similarly, in Peru and Colombia, CCAFS gender specialists provided capacity support to government officials on building gender equality into CSA policies. Direct capacity enhancement with farmers continued, such as training in post-harvest storage in Ghana, working with 750 farmers in Haryana and Punjab to develop 'picture-based insurance' for wheat, and roving CSA workshops in northern Vietnam for women and men farmers from Lao PDR, Vietnam and Cambodia. CCAFS reached 2 million listeners through a radio campaign in Philippines in 5 local languages.

G. RISK MANAGEMENT

CCAFS management updated its risk catalogue, with input from the ISP and CIAT Board. The top three risks identified were: 1) Funding instability from year to year and going into Phase II; 2) Loss and erosion of funding, including Centers not raising and allocating bilateral funds to CCAFS; and 3) Weak commitment and/or capacity of CGIAR Centers to deliver a cohesive body of CGIAR climate change science given the incorporation of climate change issues in all CRPs in Phase II. On #1 and #2, the challenges of the funding environment remain as strong as ever, with no certainty of an annual budget well into the operating year, and sharp declines in budget (W1&2 total declined by 30% from 2015 to 2016). The funding issues increase uncertainty and reduce partner trust and critical mass of research to have impact. The decrease in funds to Flagship Leaders and Regional Program Leaders means loss of critical synthesis and crosscutting work. Loss of funding also means CCAFS loses leverage to align Centers' research to the program.

CCAFS increased communication on funding trends to partners so as to alert all to the challenges and try and maintain trust. CCAFS management is committed to increase the W3-Bilateral funds, including by providing incentives (e.g., through performance-based management) and more support to all the participating Centers, so that W1-2 dependence is reduced. #3 relates to how CCAFS handles its role as an Integrating CRP (ICRP). Much effort will be needed to shape the ICRP role of CCAFS, and the CCAFS management team convened several meetings to discuss how integration will be achieved. Given the interest by CRPs/Centers to raise funds using climate change as a hook, there may be a tendency to disperse efforts to issues that are not strategic from a climate change perspective. CCAFS management committed to continue doing rigorous prioritisation work, so that priorities for climate change adaptation and mitigation are clarified and globally acknowledged through peer review and input from stakeholders, from farm to global levels.

H. LESSONS LEARNED

"Lessons learnt" is a regular item on the ISP agenda. As a source of "lessons learning", the external evaluation has proved useful. CCAFS convened a workshop of the core team to reflect on the findings, which were also discussed by the ISP. This has led to deeper thinking on, amongst other things: the beneficiaries (focusing on the most climatically vulnerable groups is too simplistic an approach); regional and country targeting (CCAFS has committed to a re-prioritisation in 2019 for implementation in 2020-2022; this will include consideration of thematic targeting); capacity development (CCAFS believes that capacity development must be done in relation to impact pathways and ToCs); the ToC itself (see below); and CSVs (see below).

Through "lessons learning", CCAFS prepared a <u>peer-reviewed publication</u> on the ToC approach. Early interaction with users led to a considerable simplification of the initially-tested approach to arrive at something that was not seen as overly burdensome. Not everything can be measured; this highlights the need for narratives that can complement and support quantitative information. Impact assessment methodology needs to evolve considerably to address social processes and outcomes in robust ways. The online platform for project planning, reporting and evaluation has proved to be a good vehicle for learning as well as project management. There are substantial costs involved in applying a ToC approach, though the benefits outweigh the costs of a simplified ToC approach.

The CSV approach has been exceptionally well received by some (including investors) but has also been criticised. The CCAFS core team held several workshops to discuss the approach and improve the documentation (see brochure; forthcoming publications) and implementation of CSVs. To critically assess local implementation, CCAFS engaged a University of Copenhagen student to undertake a Ph.D. on the political science aspects of CSV stakeholder dynamics. This will be written in 2017, but through informal feedback she has indicated shortcomings and has prepared a methods guideline, so that similar studies in other CSVs can be conducted, with the aim of improving stakeholder processes.

In terms of the <u>CRP Performance Matrix</u>, four of the eight targets for the period 2015-2016 were exceeded, two were met, one was nearly met, and one was not met. Both targets that were not achieved (Flagship 1, Target 2; Flagship 3, Target 2) are for substantially new areas of work, and progress has been slower than expected, largely because of major budget cuts.

CCAFS has now had two years of experience with this system of targets and indicators, so core team members have reflected on their value. (a) Setting targets a priori can be difficult, resulting in exceeding or not meeting expectations that is less due to implementation effectiveness than to initial target estimation or budget cuts. However, with more priority setting and experience, target setting can be improved. (b) Some indicators are difficult to measure and may need to be reconsidered (e.g. monetary values invested may be easy to obtain for new "projects" but are less easy to obtain when involving ministry budgets; "organisation" could be interpreted as a one Ministry or as several District Council's in the Ministry).

Notes

(1) ICRAF, IFPRI and WORLDFISH did not provide W1W2 Audit Confirmations.

(2) Additional W1W2 funding on top of the 2016 FinPlan were included as part of the PMU budget.

Report Description

Name of Report: CRP7 / CCAFS - Expenditure by natural classification (by Center)

Reporting Line: Lead Center Report to Consortium Office

Frequency/Period: Annual

Delivery: Every April 15th

CRP No. 7: CCAFS - CLIMATE CHANGE, AGRICULTURE AND FOOD SECURITY

Period: January 1/2016 - December 31/2016

Amounts in USD 000's

Notes:

(1) Expenses from ICRAF, IITA and IWMI were estimated by category, flagship and gender as final expenditure details were not submitted on time.

(2) ICRAF, IFPRI and WORLDFISH did not provide W1W2 Audit Confirmations.

(3) Additional W1W2 funding on top of the 2016 FinPlan were included as part of the PMU budget.

Report Description

Name of Report: CRP7 / CCAFS - Flagship Report

Reporting Line: Lead Center Report to Consortium Office

Frequency/Period: Annual

Delivery: Every April 15th

CCAFS Flagship Titles

Flagship 1: Climate-smart agricultural practices

Flagship 2: Climate information services and climate-informed safety nets

Flagship 3: Low-emissions agricultural development

Flagship 4: Policies and institutions for climate-resilient food systems

CRP No. 7: CCAFS - $\underline{\text{CLIMATE CHANGE, AGRICULTURE AND FOOD SECURITY}}$

Period: January 1/2016 - December 31/2016

Amounts in USD 000's

8	Total number of users of these open access databases	43,220	23,377	37,221	57,572	50,000	59,762	(User data available for 11 databases) 1. http://www.agtrials.org 2. http://www.ccafs-analogues.org/tool 3. http://www.ccafs-climate.org 4. http://maprooms.ciat.cgiar.org/ 5. https://dataverse.harvard.edu/dataverse/CCAFSbaseline 6. http://gisweb.ciat.cgiar.org/MarkSimGCM/ 7.http://data.ilri.org/portal/organization/ilri?q=impactlite&sort=score+desc%2C+metadata_modified+desc 8. http://ag-impacts.org/ 9. http://samples.ccafs.cgiar.org/emissions-data/ 10. http://hdl.handle.net/10568/73255 11.https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10 .7910/DVN/DHXBJX		50,000
9	Number of publications in ISI journals produced by CRP	77	98	114	93	100	118	List of 2016 publications		110
10	Number of targeted agro-ecosystems analysed/characteris ed by CRP	9	12	15	20	20	36	villages) where AR4D is conducted. All CSV sites have now been characterised, though not all of these are published yet. Each is part of a particular agro-ecological zone or encompasses several agro-ecological zones. Site descriptions are found here:	Previous sites where work has been conducted have been	35

									'upgraded ' to CSVs by adding some needed elements	
11	Estimated population of above-mentioned agroecosystems (thousands)	TBD	TBD	TBD	225,000	225,000	300,000	Estimated based on rural populations in target countries falling in the agro-ecosystems		300,000
					CAPACI	TY ENHAN	CEMENT AN	ND INNOVATION PLATFORMS		
#	Indicator	2012	2013	2014	2015			2016		2017
#	indicator	Actual	Actual	Actual	Actual	Target	Actual	Link to supporting databases	Deviation	Target
12	Number of trainees in short-term programs facilitated by CRP (male)	4,679	9,455	25,300	29,589	15,000	7,929	Data derived from annual reports of all project participants	Budget cuts reduced what was feasible	7,500
13	Number of trainees in short-term programs facilitated by CRP (female)	3,989	14,602	23,000	25,607	15,000	5,263	Data derived from annual reports of all project participants	Budget cuts reduced what was feasible	7,500
14	Number of trainees in long-term programs facilitated by CRP (male)	488	622	59	68	50	65	Data derived from annual reports of all projects	In future years this number may decline due to budget cuts	45
15	Number of trainees in long-term programs facilitated by CRP (female)	474	522	43	54	50	62	Data derived from annual reports of all projects	In future years this number may decline due to budget cuts	45

16	Number of multi- stakeholder R4D innovation platforms established for the targeted agro- ecosystems by the CRPs	24	3	10	39	35	40	Data derived from annual reports of all project participants; this number refers to long-term platforms, not those established for short-term projects		40
				Т	ECHNOLOG	IES/PRACT	ICES IN VA	RIOUS STAGES OF DEVELOPMENT		
щ	# Indicator 2012 2013 2014 2016							2016		2017
#	Indicator	Actual	Actual	Actual	Actual	Target	Actual	Link to supporting databases	Deviation	Target
17	Number of technologies/NRM practices under research in the CRP (Phase I)	256	88	120	125	120	125	Data derived from annual reports of all projects		120
18	% of technologies under research that have an explicit target of women farmers	7%	31%	20%	34%	35%	45%	Data derived from annual reports of all projects		40%

19	% of technologies under research that have been assessed for likely gender- disaggregated impact	9%	25%	16%	42%	45%	50%	Data derived from annual reports of all projects		50%
20	Number of agro- ecosystems for which CRP has identified feasible approaches for improving ecosystem services and for establishing positive incentives for farmers to improve ecosystem functions as per the CRP's recommendations	19	20	26	20	20	36	Number based on those covered by climate-smart villages; with some climate-smart villages yet to receive much attention in relation to ecosystem services (In CCAFS case this is largely focussed on GHGs) because of limited options for GHG reductions	Previous sites where work has been conducted have been 'upgraded ' to CSVs through adding in some of the needed elements	35
21	Number of people who will potentially benefit from plans, once finalised, for the scaling up of strategies (thousands)	TBD	TBD	TBD	30,000	30,000	30,000	This is an estimated number based on the likely reach of CCAFS and partners by 2025. It represents a fraction of the total population in the agro-ecosystems covered by CCAFS (indicator 11), but with further time the reach can be expanded.		30,000
22	Number of technologies /NRM practices field tested (phase II)	57	20	35	45	25	47	Crop Management: improved varieties; intercropping; increased farm diversity; raised beds; crop rotation; direct-seeded rice; laser land leveling technology; bank cultivation; bund; dynamic crop calendar; off-season gardening; rice cum fish farming; tree pruning applied to crops - Pasture Management: fodder shrubs - Livestock: improved breeds - Fish Management: conservation aquaculture; fisheries intensification - Water Management: water harvesting; irrigation; rice management; planting pits; integrated water management at village scale - Contour ridging: earth bund; half-moon; macro-/microcatchments;	A detailed inventory has been carried out including the new CSV sites, which were not recorded initially.	50

								ties ridges - Soil Management: crop residue retention/incorporation; no/reduced tillage; mulching; biochar; conservation agriculture; green manure; microdosing; pH management - Nutrient Management: organic fertilizer; integrated nutrient management; inorganic fertilizer - Agroforestry: tree planting; tree management - pruning; fallows - agroforestry fallows; intercropping - leguminous tree intercropping & multi-strata; farmer managed natural regeneration - Energy: solar energy (associated with irrigation pumps); improved cook stoves	
23	Number of agro- ecosystems for which innovations (technologies, policies, practices, integrative approaches) and options for improvement at system level have been developed and are being field tested (Phase II)	12	15	28	20	20	36	Data derived from annual reports of all project participants; based on the agro-ecosystems covered by Climate-Smart Villages	35
24	% of above innovations/approac hes/options that are targeted at decreasing inequality between men and women	29%	31%	12%	40%	35%	45%	Data derived from database on technology testing in CSVs	45%
25	Number of published research outputs from CRP utilised in targeted agro-ecosystems	19	63	55	83	50	75	Data derived from annual reports of all project participants	50

26	Number of technologies/NRM practices released by public and private sector partners globally (phase III)	1	15	4	3	5	6	1. Tricot crowdsourcing methodology 2. Site-specific agro-climatic forecasts in Colombia and Honduras 3. RHoMIS tool taken up by two iNGOs and one GO 4. PICSA – participatory delivery of climate information 4. ENACTS – Training and support in ENACTS enabled NMHS in Rwanda, Mali and Ghana to generate and disseminate online, placebased, agriculture-relevant, historic and monitored climate information 5. CRAFT - improved crop production forecasts in West Africa 6. Online-based prototype of the situation room & data collection and analysis system for early warning		6

27	Numbers of policies/ regulations/ administrative procedures analyzed (Stage 1)	59	118	51	63	50	58	Data derived from annual reports of all project participants		50
28	Number of policies / regulations / administrative procedures drafted and presented for public/stakeholder consultation (Stage 2)	18	53	14	47	20	31	Data derived from annual reports of all project participants		25
29	Number of policies / regulations / administrative procedures presented for legislation (Stage 3)	4	7	5	6	5	10	1. Bhutan Biodiversity Act of 2016 2. National Environmental Policy (NEP), Tanzania, presented for legislation: See Info Note for info on the process of working with stakeholders 3. Agriculture Sector Strategic Plan (ASSP), Uganda 4. Policy for Productive Development, Costa Rica (Refer to ID# 112) 5. National Strategy for Adaptation to Climate Change in the Agrifood Sector, Honduras 6. National Plan for the Rural Sector (PNSR), Burkina Faso 7. National Livestock Policy, Ghana 8. Draft laws developed and subject to national consultations in Madagascar and Benin 9. In Vietnam, SRP (a UNEP initiative) promoted standards on	Policy processes are not predictabl e; they may be subject to delays and uncertaint ies, so some have been	10

								sustainable use of resources and low GHG emissions 10. State and non-state actors prepare implementation guidelines and concept notes to scale-up CSA in Tanzania	slower than expected, while others have been quicker. Progress here was faster than expected.	
30	Number of policies / regulations / administrative procedures prepared passed/approved (Stage 4)	4	6	3	24	10	7	1. Rice Master Plan, Vietnam, approved 23 May 2016 by MARD. IRRI, P8 (Refer to ID# 113) 2. Rice trade policy and restructuring of the National Food Authority, Philippines. IFPRI, P4: Extensive newspaper coverage links in the P4 2016 project report and some from 2015, though no outcome story presented in 2015 or 2016. 3. Water-energy nexus program (PMKSY), India (Refer to ID# 134) 4. Nepal Treaty Implementation Plan approved. Implementing the ITPGRFA in Nepal: Achievements and challenges 5. National livestock low emission strategy ratified by the Costa Rican government (ENDGBC) 6. Costa Rican Coffee NAMA 7. Paddy rice research supports Vietnam's move from INDC to NDC	Policy processes are not predictabl e; they may be subject to delays and uncertaint ies, so some have been slower than expected, while others may be quicker	10
31	Number of policies / regulations / administrative procedures passed for which implementation has begun (Stage 5)	3	1	5	5	5	7	1. Climate Change Priorities Action Plan for Agriculture, Cambodia: P63 project report, 2016 (implementation is mentioned in the report; the outcome case study from 2015 was published in 2016) 2. Climate-related risk management financing, Government of Timor Leste (Refer to ID# 133) 3. Central American Agricultural Council (CAC) strongly promoting CSA within regional policies and agreements (CIAT, CATIE, ECLAC, FAO, UCI (Refer to ID# 83)	Policy processes are not predictabl e; they may be subject to delays and	7

						OUI	COMESON	4. National livestock low emission strategy ratified by the Costa Rican government (ENDGBC) 5. Costa Rican Coffee NAMA 6. Official GHG measurement guidelines Vietnam approved by MARD and has been adopted by Vietnamese partners 7. Rainforest Alliance used CCAFS research to update the manner it is supporting the roll-out of its Sustainable Agriculture Network (SAN) standard that underpins all of their crop-specific certifications	uncertaint ies, so some have been slower than expected, while others may be quicker	
		2012	2013	2014	2015		2011123 31	2016		2017
#	Indicator	Actual	Actual	Actual	Actual	Target	Actual	Link to supporting databases	Deviation	Target
32	Number of hectares under improved technologies or management practices as a result of CRP research	287,792	121,686	185,000	587,501	650,000	491,000	Data derived from annual reports of all project participants.		344,000
33	Number of farmers and others who have applied new technologies or management practices as a result of CRP research (thousands)	928	73	390	3,869	4,000	4,000	Data derived from annual reports of all project participants.		4,000

ANNEX 2: PERFORMANCE INDICATORS FOR GENDER MAINSTREAMING WITH TARGETS DEFINED

Exceeded performance requirements

CO proposed format:

Pei	formance indicator	CRP performance approaches requirements	CRP performance meets requirements	CRP performance exceeds requirements
1.	Gender inequality targets defined	Sex-disaggregated social data is being collected and used to diagnose important gender-related constraints in at least one of the CRP's main target populations	Sex-disaggregated data collected and used to diagnose important gender-related constraints in at least one of the CRP's main target populations And The CRP has defined and collected baseline data on the main dimensions of gender inequality in the CRP's main targets populations relevant to its expected outcomes (IDOs)	Sex-disaggregated data collected and used to diagnose important gender-related constraints in at least one of the CRP's main target populations And The CRP has defined and collected baseline data on the main dimensions of gender inequality in the CRP's main targets populations relevant to its expected outcomes (IDOs) And CRP targets changes in levels of gender inequality to which the CRP is or plans to contribute, with related numbers of men and women benificiaries in main target populations
2.	Institutional architecture for integration of gender is in palce	 CRP scientists and managers with responsibility for gender in the CRP's outputs are appointed, have written TORs. Procedures defined to report use of available diagnostic or baseline knowledge on gender routinely for assessment of the gender equality implications of the CRP's flagship research products as per the Gender Strategy CRP M&E system has protocol for tracking progress on integration of gender in research 	CRP scientists and managers with responsibility for gender in the CRP's outputs are appointed, have written TORs. Procedures defined to report use of available diagnostic or baseline knowledge on gender routinely for assessment of the gender equality implications of the CRP's flagship research products as per the Gender Strategy CRP M&E system has protocol for tracking progress on integration of gender in research And A CRP plan approved for capacity development in gender analysis	CRP scientists and managers with responsibility for gender in the CRP's outputs are appointed, have written TORs. Procedures defined to report use of available diagnostic or baseline knowledge on gender routinely for assessment of the gender equality implications of the CRP's flagship research products as per the Gender Strategy CRP M&E system has protocol for tracking progress on integration of gender in research And A CRP plan approved for capacity development in gender analysis And The CRP uses feedback provided by its M&E system to improve its integration of gender into research

ANNEX 3: CCAFS STAFFING

	Female	Male	Total	% Female
Director	0	1	1	0%
Program Management Committee - PMC (Director, FPL, RPL)	2	4	6	33%
FPL/Cross-cutting Leaders/RPL	5	6	11	45%
Science Officers/Communication manager/Data manager/Finance Manager	8	6	14	57%
Support staff to above	7	4	11	64%
Total CCAFS Staff (the above is not additive, as the PMC overlaps with other groupings)	22	21	43	51%
