

A new version of the Africa Tree Finder

Project Title: P801 - 1. Restoration (forest and landscape restoration)

Description of the innovation: This easy-to-use App shows you data on the distribution of indigenous tree species in different natural vegetation types, combined with information on the products and services that the tree species can provide. It arms you – local community members, government agencies, private sector owners, and other land managers – with the information you need to select the best tree species for your landscape restoration or agroforestry effort. The Africa Tree Finder can tell you which trees are best suited to meet the demand for wood-based products, human consumption, animals, and environmental services. It can also tell you the local names of species and provides vital information on propagation and seed treatment, storage and management.

New Innovation: No

Stage of innovation: Stage 3: available/ ready for uptake (AV)

Innovation type: Research and Communication Methodologies and Tools

Geographic Scope: Regional

Number of individual improved lines/varieties: <Not Applicable>

Region:

- Eastern Africa

Description of Stage reached: Fully developed tool for identification of indigenous tree species in different natural vegetation types

Name of lead organization/entity to take innovation to this stage: ICRAF - World Agroforestry Centre

Names of top five contributing organizations/entities to this stage:

- ICRAF - World Agroforestry Centre
- IUCN - International Union for Conservation of Nature

Milestones: No milestones associated

Sub-IDs:

Contributing Centers/PPA partners:

Evidence link:

- <https://tinyurl.com/ybvopz97>

Deliverables associated: <Not Defined>

Contributing CRPs/Platforms:

- FTA - Forests, Trees and Agroforestry
