

World Organisation for Animal Health (OIE) guidelines on prioritization of animal diseases for which the use of vaccines could reduce antimicrobial use

Project Title: P608 - Activity 2.2.2: Establish protocols for survey of antimicrobial use and for monitoring AMR

Description: <Not Defined>

Is new?: No

Stage of Maturity of the Process: Stage 2

Policy/Investment Type: Policy or Strategy

Amount: <Not Applicable>

Geographic Scope: Global

Outcome Impact Case Report:

- 2823 - Incorporation of developing country perspective in World Organisation for Animal Health (OIE) guidelines on prioritization of animal diseases for which vaccines could reduce antimicrobial use (<https://tinyurl.com/2dnsp5p7>)

Innovations: <Not Provided>

Narrative of Evidence: <Not Applicable>

Milestones: <Not Provided>

Sub-IDs:

- 21 - Increased safe use of inputs
- 20 - Reduced livestock and fish disease risks associated with intensification and climate change

Contributing Centers/PPA partners: <Not Provided>

Contributing CRPs/PTF:

- Livestock - Livestock
- A4NH - Agriculture for Nutrition and Health
