About SAPLING

CGIAR's Sustainable Animal Productivity for Livelihoods, Nutrition and Gender inclusion (SAPLING) is working in seven countries focusing on livestock value chains to package and scale out tried-and-tested, as well as new, innovations in livestock health, genetics, feed and market systems. SAPLING aims to demonstrate that improvements in livestock productivity can offer a triple win: generating improved livelihoods and nutritional outcomes; contributing to women's empowerment; and, reducing impacts on climate and the environment. Its seven focus countries are Ethiopia, Kenya, Mali, Nepal, Tanzania, Uganda and Vietnam.

Acknowledgements

This work was conducted as part of the CGIAR Initiative on Sustainable Animal Productivity. CGIAR research is supported by contributions to the CGIAR Trust Fund. CGIAR is a global research partnership for a food-secure future dedicated to transforming food, land, and water systems in a climate crisis.

Background to training

In Ethiopia, consumption of animal-source foods is very low. Chicken meat is one of the most valued foods among people of all ages throughout the world. Not only does it form a crucial part of various culinary traditions, but it is also highly nutritious and delicious. Although chicken meat has numerous health benefits, Ethiopia has one of the world's lowest per capita poultry and poultry product consumption rates compared with regional and global averages.

The Tropical Poultry Genetics Solutions (TPGS) program, which is led by the International Livestock Research Institute (ILRI) is working to improve the consumption of chicken products in its on-farm nutrition-sensitive, and school feeding programs in different countries, including Ethiopia. At the same time, the TPGS team has prepared a proposal for creating decent jobs for the youth that will be jointly implemented by ILRI and the Ministry of Labor and Skills (MOLS). The TPGS team has targeted boosting street meat consumption in four major cities in Ethiopia: Addis Ababa, Adama, Bahir Dar, and Hawassa as key activity for creating jobs for the youth and improving chicken meat consumption. In collaboration with the MOLS 45 unemployed youth from these cities were selected and given theoretical and practical chicken meat frying businesses skills training for 11 days. ILRI procured and donated 10 gas and 10 electric stoves to the MOLS to promote the street fried chicken business in these cities.

The "Developing entrepreneurial skills for training on chicken meat frying business" training targeted young unemployed graduates recruited from four administrative cities of Ethiopia (Addis Ababa, Adama, Bahir Dar, and Hawassa) to enable them to create their own businesses in chicken meat frying and selling and improve chicken meat consumption among urban dwellers. This activity is linked to the CGIAR Sustainable Animal Productivity for Livelihoods, Nutrition and Gender inclusion (SAPLING) Work Package 2—Innovations and practices for safe livestock-derived foods consumption as part of diverse diets.

Location and modality

The training was provided face-to-face and held in Addis Ababa, Ethiopia.

Dates

This training was held 2–12 August 2023.

Who conducted the training?

The International Livestock Research Institute (ILRI) provided the training in partnership with the Ministry of Labor and Skills (MOLS). Trainers were selected from ILRI, MOLS, and two other institutes, the Addis Ababa Tourism Training Institute (TTI) and Entrepreneurship Development Institute (EDI).

Objectives of the training

The main objectives of the training were:

- 1. To encourage unemployed youths in self-employed chicken frying and selling businesses.
- 2. To build their technical capacity in chicken meat frying, packaging, and marketing businesses.
- 3. To promote chicken meat consumption in the selected cities.

4. To motivate unemployed youth in the cities to invest in the chicken-rearing business as an input for the chicken frying business.

Training agenda

The training focused on four areas: (i) the soft skill component that included basic skills for successful businesspersons, (ii) business expansion options, (iii) basic components of a business plan, and (iv) how to start, run, and manage a new business. The second component covered an overview of broiler production. The third component of the training was on business plan preparation. The fourth and last one was on safety, food and personal hygiene, and practical cooking demonstrations.

Training participants

The trainees were drawn from Addis Ababa, Adama, Bahir Dar, and Hawassa. All the trainees are unemployed graduates interested in and motivated to engage in the chicken business. Before the training, selecting criteria were set by the MOLS, and each participant went through this process. A total of 43 (25 female) youth were trained at Addis Ababa Tourism Training Institute, as shown in Table 1 below. At the end of the training, all the trainees were graduated and certified by the MOLS and ILRI.

Table 1: Number of trainees aggregated by sex and city

Cities	Number		
	Male	Female	Total
Addis Ababa	4	6	10
Adama	7	3	10
Bahir Dar	3	8	11
Hawassa	4	8	12
Total	18	25	43

Comments or next steps

After completing the training, the MOLS is expected to grant to the trainees the stoves procured by ILRI with appropriate procedures. Regional bureaus are advised to link these graduates with microfinance institutes for accessing loans. Besides this, the microfinance institutes have already financed street shed construction for business premises. The MOLS and ILRI have also agreed to organize a model chicken frying launching event in Addis Ababa that will include the media, officials from different ministries, representatives of development organizations and other stakeholders promote the street chicken meat frying business.

CGIAR's Sustainable Animal Productivity for Livelihoods, Nutrition and Gender inclusion (SAPLING) is working in seven countries focusing on livestock value chains to package and scale out tried-and-tested, as well as new, innovations in livestock health, genetics, feed and market systems. SAPLING aims to demonstrate that improvements in livestock productivity can offer a triple win: generating improved livelihoods and nutritional outcomes; contributing to women's empowerment; and, reducing impacts on climate and the environment. Its seven focus countries are Ethiopia, Kenya, Mali, Nepal, Tanzania, Uganda and Vietnam.
