A New Global Alliance for a Safer, Fairer and More Sustainable Livestock Sector

In the face of a fast-growing, resource-hungry and commonly misunderstood livestock sector, it is clear that increased investment in the sector is essential to livelihoods, global health and the environment. To address livestock as a global public good, a strengthened alliance has been formed among key institutions charged with shaping and steering the global livestock agenda.

We, the representatives of global and regional institutions whose mandates cover livestock, met in Nairobi, Kenya, 12-13 March 2012. We exchanged ideas, concerns, experiences and expertise with the aim of developing closer partnerships, a shared vision and more complementary programs for a global livestock agenda.

Our consultation came at an opportune time. Global production and consumption of meat, milk and eggs are growing fast, especially in developing countries, in the face of diminishing natural resources. Decision-makers and investors continue to under-appreciate the critical role that livestock play in the lives and livelihoods of the world’s poorest people. The world remains alert to the risk of pandemics arising at the interface between people and animals.

We agreed that social equity, global health and the environment should be considered among the strategic ‘pillars’ of the global livestock agenda. There was also much concurrence on the issues and challenges facing the livestock sector and the ways to address them.

We are building this alliance to work in closer partnerships, with each organization bringing to bear its comparative advantage. Together we aim to be more effective in explaining to the world better why livestock are essential to the society and to the health and wellbeing of the poor and to show leadership in addressing the challenges and opportunities that livestock can bring.

We will do this by marshalling the best evidence to support our case; directly addressing the harm as well as benefits generated by livestock; learning from successes and failures to design and implement the most appropriate programs and policies; exploiting advances in our understanding of complex systems and powerful new technologies; and building on existing successful initiatives. We aim to develop strategic goals, and to create, and share publicly, a means to measure progress against these goals.

We invite our colleagues in other institutions, public and private, to join us.
