To get more fodder from maize do one of the following...

• Dig double the normal holes and plant 4-5 seeds per hole

• Use less spacing between holes and plant not more than 4 seeds per hole

• Use less spacing between rows and plant not more than 4 seeds per hole

...and you get feed from maize when other feed is scarce
...and saves buying feed off farm

If you plant maize densely...

If you plant

You get more and better fodder from the same land

You get feed from maize when other feed is scarce

One of the ways to reduce lack of cattle feed and get more milk.

If you plant maize densely...

Mix manure - fertilizer and soil before planting seeds or plant seeds in the soil around the hole. This will ensure the manure - fertilizer does not scorch the seeds.

One of the ways to reduce lack of cattle feed and get more milk.

First planting method

Second planting method

Third planting method

Plant beans between maize rows, not in the same hole as the maize. Plant beans on the same day as the maize.

One of the ways to reduce lack of cattle feed and get more milk.

Plant beans between maize rows, not in the same hole as the maize. Plant beans on the same day as the maize.

One of the ways to reduce lack of cattle feed and get more milk.

Plant beans between maize rows, not in the same hole as the maize. Plant beans on the same day as the maize.

One of the ways to reduce lack of cattle feed and get more milk.

Plant beans between maize rows, not in the same hole as the maize. Plant beans on the same day as the maize.
The usual fertilizer rate is one ‘fanta’ soda top or one teaspoonful per hole. The usual manure rate is two handfuls per hole. Double this if you plant densely.

The bean yield is reduced where beans are planted together with maize.

When you plant more seeds you have many small cobs.

Remove weak, thin and sick plants anytime you weed.

Maize planted densely gives me...

To get fodder from maize...

In case of low rainfall when no cobs form use cobs for feed.

Double this if you plant densely.

One of the ways to reduce lack of cattle feed and get more milk.

The bean yield is reduced where beans are planted together with maize.

Plant densely!

One of the ways to reduce lack of cattle feed and get more milk.
