Stakeholder Roles in the Tanzania Livestock Master Plan (LMP) Process

Stephen Michael
(Ministry of Agriculture, Livestock and Fisheries)

Launch of Tanzania Livestock Master Plan, Dar es Salaam, Tanzania, 23 February 2016
Stakeholder Process of Developing the Livestock Master Plan (LMP)

- Creating a LMP requires a “quantitative data-based sector” analysis (LSA) but “stakeholder” involvement is essential
- Dynamic herd and sector models are built to do a 15 year livestock sector analysis (LSA) – baseline, projections and foresight analysis
- The LMP process is data-based, but consultative. Over 50 specialists will provide data and parameters on animal productivity, as well as input into value chain price analysis and other cross-cutting issues
- Other periodic stakeholder consultations will be held to verify data, parameters and results
- Stakeholders will help create a national data base and model baselines, and help identify potential interventions
- A Technical Advisory Committee with institutional reps is guiding the process to ensure the LMP is realistic and relevant to Tanzania
Purpose of the Technical Advisory Committee

In order to facilitate the preparation of the LMP, and to widen and ensure the ownership of the LMP by all key sector stakeholders, a technical advisory committee (TAC) of livestock professionals from key stakeholder institutions has been set up.

The TOR of the TAC is to ‘advise and oversee all developments in the preparation of the Tanzania LMP’. This includes the formulation of the strategy and LMP roadmaps, the review of progress, and providing feedback to the LMP team led by the MALF coordinators and the ILRI project advisor.
Purpose of the Stakeholder Consultations

In order to contribute to the preparation of the LMP, and to widen and ensure the ownership of the LMP by all key livestock sector stakeholders, consultations with key stakeholders -- livestock scientists, development experts, CSOs, private sector investors, NGOs, development partners (DPs), etc. will take place.

The purpose of the stakeholder consultations is to provide feedback on the preparation of the Tanzania LMP. This includes providing feedback to the LMP team on the formulation of the LMP strategy and LMP roadmaps, the review of the data and parameters used, as well as the results and conclusions, to ensure the LMP is relevant and useful.
Development of Situational Reports on Cross-cutting Issues

- Animal Genetics (effects on productivity)
- Animal Feed (supply and demand – current and future)
- Animal Health and Vet Services
- Livestock Product Value Chains - price and competitiveness analysis
- Dynamic National Herd Model – current productivity and future growth projections
- Household Data and Analysis – HH income and poverty reduction
- GDP, National Food Security and Trade Analysis – current situation and future projections
- Policy and Institutions, including Land Use
TOR for Stakeholder Input into the LMP Formulation Process

• Provide data on productivity and economic parameters for the herd and economic models (mainly livestock production experts and economists)
• Contribute to the development of the “situational reports on cross-cutting issues” – animal genetics, feed, health, policies and institutions, etc. (livestock production experts and economists)
• All stakeholders to participate in consultations to provide feedback on LMP data, parameters, investment results for technology and policy interventions, and conclusions, and ensure relevance
• Livestock specialists and other stakeholders to participate in the reviews of the drafts of the LMP reports
• All stakeholders to contribute to achieving eventual consensus on the LMP reports
The Core LMP Team – MALF, ILRI staff (& BMGF)
