

Our vision

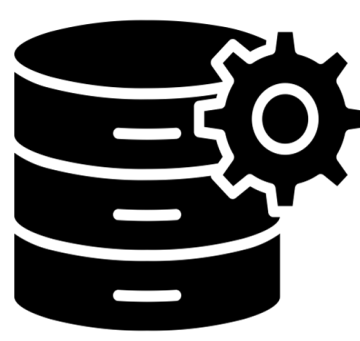

- Vulnerable pastoral and agro-pastoral communities in East Africa are more prepared for and resilient to the effects of evolving environmental shocks and stresses on their food security and nutrition

Our mission

- We broker science, knowledge, and real-world action to develop inclusive solutions to environmental shocks facing dryland communities.
- Through a Community of Practice that unites data, science and practice and undertakes action research, learning and innovation, the Observatory convenes dialogue, generates evidence, catalyzes collaboration, develops capacities and communicates for change to improve the lives and livelihoods of pastoral and agro-pastoral communities in East Africa.

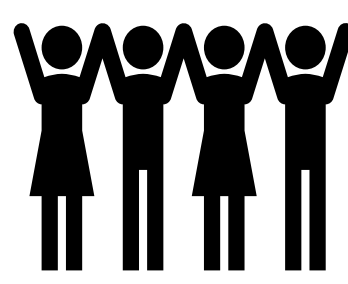

Our early action agenda

Data for
