Livestock interventions in low-income countries: A theory of change for improved nutrition

Johanna Lindahl1,2,3, Florence Mutua1, Delia Grace1

1 International Livestock Research Institute 2 Swedish University of Agricultural Sciences 3 Uppsala University, Sweden

Virtual Agriculture, Nutrition and Health (ANH) Academy Week 2020 research conference

30 June – 2 July 2020
Assumption 1: The intervention is feasible and people change their behavior

Livestock intervention
- Improved nutrition
- Reduced disease
- Better breeds

Assumption 2: The intervention actually leads to improved production

Improved production
- More products for sell
- More food
- Reduced costs

Assumption 3: The increased gains translates into more and better food

Improved livelihoods
- Better health
- Less stunting
- Higher resilience
better lives through livestock
