

ELearning is making it possible for blended learning in our context. Graphic from http://www.cvo-europe.com

Context

- Dairy milk producers, agripreneurs and value chain actors and agripreneurs lack some key technical and soft skills needed for optimal results in their enterprises
- With capacity building on these skills, producers and agripreneurs will improve their enterprises
- This project will impact on dairy producers and agripreneurs including women and youth in the Kilimanjaro and Tanga regions of Tanzania

Our innovative approach

- Dairy producers and agriprenuers often lack access to structured trainings on key technical and soft skills.
- Developing online training materials using research outputs from previous work in dairy for use in enhancing these skills that are necessary in improving their enterprises

POVERTY REDUCTION, LIVELIHOODS & JOBS

eLearning to enhance skills in dairy production and agripreneural capacity in Tanzania

- eLearning training can augment traditional training in enhancing the capacity of dairy producers and other value chain actors on technical skills
- Agripreneures can benefit from tailored soft skill training to improve their businesses
- eLearning training materials have the benefit of outliving in-person trainings that depend on delivery by individuals

PROGRAM C Livestock

TANZANIA PRIORITY
COUNTRY PROGRAM

Edwin Kang'the, ILRI e.Kangethe@cigar.org

Outcomes

- Towards enhancing technical and business skills of producers and other value chain actors, training needs assessment is underway to tailor the training needs;
- To ensure that business training is standard and impactful, we are preparing to adapt UNCTAD's EMPRETREC entrepreneurship training materials to our dairy context
- To ensure that we address an existing problem, the technical and soft skill gaps were already identified in a stakeholder forum

Future steps

- Made up for delays occasioned by COVID-19
- Post-2021, eLearning training can be used to reach more dairy producers and entrepreneurs beyond the current target areas especially targeting women and youth
- From the current piloting, new skill gap areas will be identified, and new courses developed to facilitate capacity building
