Thank you for the opportunity to speak with you. We are a research team from the International Food Policy Research Institute (IFPRI). IFPRI is an international non-governmental organization working to reduce poverty and hunger, and to improve food security in developing countries, including Nigeria. We are conducting a study to evaluate alternative interventions and mechanisms to improve the effectiveness of school-feeding programs on smallholders' production and marketing outcomes. This study is funded by the Norwegian Agency for Development Corporation (NORAD). The study is an independent evaluation. We are planning to include cooks from 300 schools from Osun State in Nigeria. We do not foresee any risk to you from your participation in this study, which is limited to responding to our questionnaire. We are requesting your participation and effort in responding to a survey which we have estimated would take around 10 minutes of your time. Your participation will help us answer questions about effectiveness of the school feeding program and its linkage with smallholder farmers and will help to ensure that relevant research findings are generated and provided to all those interested in this project. We expect the results of this study to be relevant to stakeholders in Nigeria, Africa, and globally. We do not foresee any direct benefits to you from your participation in this study. There is no monetary or other direct compensation for your participation. We will provide refreshments to all participating in the study. Your participation is entirely voluntary. If at any point there are any questions you do not feel comfortable answering, you can choose not to answer them. We will not be pressuring you to answer any question you do not feel comfortable answering. You can also choose to stop the interview at any point. You also have the right to withdraw your consent at any time. There are no incorrect responses to any of the questions we will ask so please feel free to state your opinion even if it differs from the general group. Your responses will not have any negative effect on your participation in any future activities. The personal information you share with us will be kept strictly confidential and will be used only to generate the overall evaluation findings. All identifiable private information will be removed from databases and future reports. This means no names of individuals will be included in databases or reports, and no personal location and other individual demographic characteristics will be available to avoid the identification of specific individuals. IFPRI will share the final report publicly and present the findings to all stakeholders. Other researchers will use this data for other projects once all identifiable information is removed.
